Previous Cohort Quotes

“The most significant lesson learned over the past two years and gains made over the past year is the culture shift that has taken place within our district. Specifically, we have made the topic of Suicide Prevention less intimidating to talk about openly.”

“The most valuable part of this initiative was the comprehensive process. Being able to do an assessment of where you were, set goals and establish an action plan, having the... assistive resources to carry out the action plan, and doing a post assessment and sustainability plan was invaluable.”

“We feel that the impact of COVID on the mental health of our students would have been much worse if we had not had... this programming [MTSP] in place. There is no doubt in the minds of our team that these efforts have saved lives.”

“Because of [MTSP], we have the capability to partner with our students, staff, families, and our larger community using best-practice tools and strategies in order to implement proactive measures to promote suicide risk awareness, to foster programs/curriculum/training that will promote protective factors and encourage willingness to respond to situations in a proactive manner.”

Thank you
